

Ricco

Ricco is a visually striking yet simple product that brings an innovative design approach to ad hoc work settings, meeting and conference environments. With the development of Ricco we

have understood the mechanical geometry of a synchronous tilting action and developed the chair so that its structural frame replicates the necessary movements. This innovative approach results in a visually and

Design by Studio Ballendat

physically light and uncomplicated product that flexes and moves intuitively. The design also allows the tension of the tilting action to naturally balance to each user without the need of manual adjustment.
